

Avalanche® ROAD SNOW PLOW

Key Features:

1 Steel Trip Edge Torsion System. Horizontally mounted springs provide optimum trip action and durability.

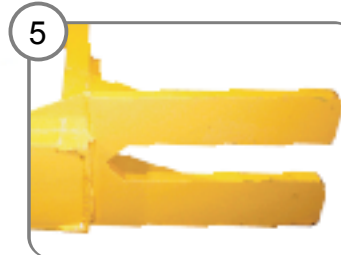

2 Steep angle of the plow enables it to efficiently clear snow to the shoulder of roads.

3 Left side panel prevents snow from spilling out the side, increasing productivity. Side panel is double braced which makes it resist buckling from impact.

4 Bucket mount receiver system allows operator to connect to plow within 5 minutes. No hydraulics necessary.

5 Receiver is made of solid steel plate.
